

# FAQs – Multiple Uncrewed Aerial Systems

Last updated July 19, 2024

**I am looking to submit to the Multiple Uncrewed Aerial Systems RFI. We have technical data sheets that meet the requirements listed. I am wondering if the submission could contain a white paper that provides a bit more detail on how the system and architecture function? Also, could you please provide some examples of "documented examples of products being actually deployed"? We have videos, program contracts, government demos, and military users currently using this capability.**

A white paper would be good if it contains at least the requested information (technical specifications, etc.). There is not a format for "documented example," but both kinds of mentioned information are welcome (i.e., client/user information and video demonstrations).
